

How can I link to iShare to show different Tabs?

iShare allows you to link to different tabs via special names or via different parameters. Obviously you can also link via an address search text input box.

Link via Address Search

This is achieved by POSTING a form into the normal myCouncilPage. The form needs a single text box with the name atTxtStreet. iShare will open on the last page remembered for the user or if they haven't visited before on the first page. The following is sample code that can be used - remember to **change** the action parameter to your page name with the full URL!

```
<html>
  <head>
    <title>Link to iShare via Address Search</title>
  </head>
  <body>
    <form name="atMapSpurForm" id="atMapSpurForm" method="get" action="http://[server_name/IP]/Ast
      <p>Enter your postcode: <input name="atTxtStreet" type="text" id="atTxtStreet" />
      <input type="submit" id="bntSubmit" value="Go">
      <input type="hidden" id="tab" name="tab" value="0"/>
    </form>
  </body>
</html>
```

Link via special tab names

Maps

You can link to the My Maps page via ?tab=maps

```
<a href="atMyCouncil.aspx?tab=maps">Goto to maps (?tab=maps)</a>
```

Alerts

You can link to the My Alerts page via ?tab=alerts

```
<a href="atMyCouncil.aspx?tab=alerts">Goto to alerts (tab=alerts)</a>
```

Link via a tab index number

You can pass an integer for the tab to show (for the first or if you have others) **NB**. If any tab is incorrect then the 'remembered' tab will be set or the first will be set (0)

```
<a href="atMyCouncil.aspx?tab=0">Goto first tab - My House (tab=0)</a>
<a href="atMyCouncil.aspx?tab=-1">If negative will ignore (tab=-1)</a>
<a href="atMyCouncil.aspx?tab=100">if too many will ignore(tab=100)</a>
<a href="atMyCouncil.aspx?unsubscribe">unsubscribe</a>
```

Link via UPRN

It is also possible to link to a specific property through the UPRN as follows

```
<a href="atMyCouncil.aspx?tab=0&action=SetAddress&UniqueId##UniqueId##">Go to UPRN</a>
```

The UPRN is substituted via the ##UniqueId## variable to be that of the currently-selected property. Alternatively a UPRN can be specified - for example to provide a link to Council Offices, or other specific place of interest.
